Education

University Of Houston Houston, TX

Bachelor of Science, Computer Science

Experience

Full-Stack Developer (Volunteer) July 2026 – Present

Masjid At-Taqwa (Synott Islamic Center) *Houston, TX*

- Built and deployed a full-stack platform (.NET 10 API, React 19/TypeScript) that automates prayer times, event signage, and lighting control on a TV display, replacing a manual weekly update process.
- Structured the backend as a modular monolith with OpenAPI-documented REST endpoints and API-key authentication, and generated a type-safe TypeScript client to catch contract drift at compile time.
- Replaced client polling with Server-Sent Events and targeted TanStack Query cache invalidation, so content edits reach the display in under a second.
- Integrated Google Calendar and Drive through push webhooks with auto-renewing subscriptions, and cached assets by checksum so only changed images are downloaded.

Technical Support Specialist Sept 2026 – Present

AcePay *Stafford, TX*

- Diagnose and isolate root causes of production defects in a live POS and payment processing platform, narrowing failures across configuration, hardware, network, and application layers, and filing structured engineering tickets with reproduction steps and expected-versus-actual behavior that led to 50+ confirmed fixes
- Proactively test production systems to identify edge cases and regressions ahead of merchant impact, writing detailed technical documentation that engineering teams use to prioritize and resolve defects.
- Resolve time-sensitive technical issues on a live payment processing system under production pressure, translating root-cause findings into clear explanations for engineering and non-technical stakeholders, and delivering 10+ live product demonstrations to prospective clients.

Projects

StoreOps (UH Cloudathon) | *AWS CDK, TypeScript, Fargate, DynamoDB, CloudFront* Nov 2026

- Co-built and deployed a migration of a legacy VM-hosted order and inventory app to AWS in under 3 hours, running ARM64 (Graviton) containers on ECS Fargate across 2 Availability Zones with on-demand DynamoDB and a CloudFront CDN to remove single points of failure.
- Defined the full environment as a reusable AWS CDK (TypeScript) construct with one-command deploys, and shipped a live v1→v2 rolling release with automatic rollback and zero failed requests, auto scaling from 2 to 10 containers at 50% CPU.

Pokémon Classifier | *Python, FastAPI, pandas, NumPy, Uvicorn* July 2026

- Fine-tuned a Hugging Face DistilBERT transformer model to classify free-text natural language descriptions into 151 classes, with 79% validation accuracy and a 0.82 weighted F1-score across 1,301 test samples.
- Engineered an automated data pipeline integrating with external REST APIs to systematically construct a high-quality, custom dataset containing 6,501 unique text descriptions, effectively eliminating contradictory training examples.
- Designed, built, and deployed a real-time, low-latency machine learning inference endpoint using FastAPI and Uvicorn to serve the fine-tuned transformer model for on-demand text classification..

Technical Skills

Languages: C++, C#, Python, Java, JavaScript, TypeScript, HTML/CSS
Frameworks/Libraries: React.js, .NET, Next.js, Node, Express.js, TailwindCSS, Jest, Socket.io, FastAPI, NumPy, Uvicorn, Quartz.NET, EF Core, SQLite
Tools/Technologies: Git, AWS, Claude Code, Docker, MySQL, Postman, Postgres, Figma, Supabase, Firebase, GitHub Actions
